

LEATHER BALM (SPRAY ON)

Leather impregnation spray that cares, protects and nourishes. Maintains the material and extends the life span of the item.

How to use:

Shake the bottle

Spray evenly on dry and clean leather, pay special attention to dried out areas

Polish lightly if necessary

Do not use on suede leather, nubuck or rubber

Leather can dry out over time and form cracks if it is not groomed. The dried up areas do not offer good protection against weather influences and water can form dark spots on the shoe.

Our leather balm is a water-based emulsion that maintains the suppleness of the leather and provides the outer surface with a weatherproof layer.

TIP:

Clean your shoes beforehand and then take care of them
