

TENT PROOFER (SPRAY ON)

Impregnation spray for tents, covers and outdoor equipment. Restores the water-repellent effect and breathability, prolongs the life span and maximizes performance.

How to use:

If necessary, clean material with STORM Wash. Shake the bottle well

Spray a distance of 10 to 15 cm

Moisten a clean cloth with proofer and rub it in. This ensures better performance and reduces ladder formation. Let the tent dry for 12 hours for a perfect result

When tents are used, the surface treatment that repels the water on the outer tent (DWR) begins to age and is damaged. The STORM tent proofer ensures that it will perform at its best for as long as possible. Our silicone-based tent impregnator does not contain harmful PFCs and offers an excellent level of performance. Applying it refreshes the DWR to its original performance and can enrich the fading of the color from UV exposure.

Tip:

To check whether an item needs more DWR, drip water onto the surface of the tent. If this runs off, the DWR works fine. If it sticks on the surface.

If the surface remains adhered or the surface is moistened and the color darkens, it is worth adding an impregnating spray.
