

DOWN PROOFER (WASH IN)

The impregnating spray for products filled with down restores the original structure of down garments as well as their water-repellent effect. This extends the life of the garments.

How to use:

Shake the bottle

Put 75ml into the softener compartment

Wash according to the manufacturer's instructions. Make sure the item is completely tumble dried and is well puffed as it dries

How to tumble dry:

Gently dry down items of clothing in the tumble dryer with the 2 drying balls. The drying balls ensure that the down is shaken up well and regains its original volume

Many down-filled articles have a DWR treatment on the outside which protects the user from moisture and the down filling. The article must be re-impregnated when the water no longer forms a drop on the fabric. Our environmentally friendly down impregnator can be used in the same wash cycle as the down wash. When cleaning the down, you should choose a gentle program and then dry it in the tumble dryer with the drying balls longer than usual. It is important to ensure that the down-filled item is completely dry to avoid the risk of smelly down. This impregnator is PFC-free and has been recognized by many brands and environmental reports for its eco-status. So that the equipment can be impregnated, heat must be supplied through a dryer or iron.
