

PROOFER FOR OUTDOOR FOOTWEAR (SPRAY ON)

Impregnation Spray for outdoor shoes which restores the water-repellent effect and breathability.

How to use:

Shake the bottle

Spray evenly onto clean shoes. Remove superfluous with a clean cloth

Let dry 12 hours for maximum effect

Using the footwear will reduce the active DWR. Using the STORM proofer for outdoor footwear revitalizes shoes as close as possible to its original performance.

Our impregnator does not contain any harmful PFOAs or PFOSs and offers an excellent level of performance.

The spraying enables an application on the outer surface in the strongest concentration.

Tip:

To check whether an article needs more DWR, drip water onto the surface of the footwear. If the water runs down, the DWR works well, if it sticks to or even moistens the surface and darkens the color, then it is time for using an impregnation spray again.
